

Innovative Waterproofing Solutions

NON-SLIP FLOOR COAT

Non-Slip Floor Coat is a similar formulation to Universal Floor Coat, with special additives that provides a high grip to any surface where more traction is required.

This product is ideal for “grip strips” on stairs and disabled ramps, especially in wet conditions. With this unique formulation of Hydro Seal, it still has the qualities such as waterproofing and flexibility. Being adhesion promoted it will bond to most substrates, which lends itself to be used as a textured wall coating that conforms to any contour.

More recent studies have shown interest by Interior design companies that favour rough textured surfaces in various applications in newly designed buildings.

Surface Preparation:	Ensure that all surrounding areas are covered and masked to avoid damage and over spray. Ensure that the base is dry and free of debris, dust or any objects that might cause non-adhesion to the substrate.
Application and Coverage:	Trowel-on: 1 coat application, coverage achieved 30m ² . 2 coat application, coverage achieved 15-20m ² .
